**RE: RGD & Associates**

To Whom It May Concern:

Approximately three years prior to this letter I was requested to chair a committee to evaluate the HVAC systems at the Palm Beach Country Club in Palm Beach, FL. In retrospect, it was fortuitous that we commissioned RGD & Associates, led by owner Bob Davenport, to review and engineer our plant.

The existing system had many hidden problems ranging from negative air flow to heat pumps seriously deteriorated due to the direct input of sea air at our front door. Our humidity problems were beginning to show in our finishes in the locker room areas, etc.

RGD undertook the redesign and retrofitting of the existing system from water towers to a design to incorporate five fresh air input machines to pre-process the air to be introduced to the ducts and heat pumps.

They were very astute in investigating the airflow in the kitchen, which proved to be the core of one of our major problems. Bob noted this was a classic country club problem emanating from the heart of the building – the kitchen.

Working with RGD & Associates and, more specifically, Bob Davenport, was not only a fruitful experience in the outcome of the work, but his commitment and attention to the job was unparalleled.

It would be my pleasure to recommend RGD for any proposed undertaking.

Sincerely,

A handwritten signature in cursive script that reads "Gerald Schuster".
